

In tough times, safety levels should not become a victim.

Hands are the most important tool any worker has. Protecting them should not be compromised, but times are tough and cost is a factor, just how do you balance it all? Safety Mate introduces the ATG range of gloves as a solution.

GLOVES AS A WORK TOOL

At Safety Mate we know that the hands of your workers are critical and fundamental to manufacturing the products you sell. That is why we view gloves as work tools rather than just a piece of personal protective equipment (PPE).

Having the correct glove can be as important as the investments made in automation given that the robots are only able to work as fast as the people who stand in between them. With the correct glove offering the appropriate level of comfort, dexterity, flexibility and grip you can significantly increase the performance of your workforce and productivity of your factory.

We believe that “less is more” which starts with a thorough understanding of the jobs you do and the combination of requirements you need to get the job done.

FOCUSED RANGE

Strangely enough, even though requirements for the outside of safety gloves are unique to one’s work-place, everyone is looking for the same features on the inside - Comfort, flexibility, dexterity and grip.

This continued understanding of your requirements has enabled ATG to develop a focused range of gloves in three families, all utilizing various ATG® technology platforms.

Less gloves also enables your workforce to easily understand which product they need. Simplicity in itself will increase compliance to your hand management program and this in turn will lower the risk of incidents occurring in your facility.

Today these three product families use five technology platforms either individually or collectively to provide you with the appropriate level of performance you need.

We believe that this is a unique, new, much valued and needed direction in the care of your most valuable asset - your workforce. We also believe that this is a clear demonstration of the commitment and investment in innovative customer based solutions. ■
