

Sanitized: Anti-microbial Protection

ATG offers "Sanitized" treatment to all of their glove range for that added unseen, but important protection.

No odor, no bacteria: Thanks to the Sanitized® built-in hygiene function. People produce perspiration during all life situations. This is an ideal culture for the growth of bacteria. And this is also the cause of the annoying, unpleasant perspiration odor.

The Sanitized® hygiene function acts like a built-in deodorant and effectively prevents the development of perspiration odor, even during heavy perspiration. You can see the benefits: your gloves remains fresh longer, offensive odors are reduced and there is less need to change to a new pair as often.
